

Summer Solstice Lone Star Template:

When straightening your fabric for your lone star strips, if you have a short length of fabric that is 1 inch wide that you can cut diagonally at a 45 degree angle to fit the diamonds on the template above. You can place your fabrics on this template to view what your lone star will look like as a star by using a folded mirror. It will show you the eight pointed star and you will be able to see if you want to move any of your fabrics around to be more pleasing. This is a template that I developed for myself to test out my fabric choices. I found it to be a useful tool and now share it with other quilters.
