

number of colorways in your quilt. You will need to apply these to your own pattern if you need to use them. Quiltster will show these fabrics as separate fabrics, but each will have the same reference number. Your Quiltster image will be your graphical reference to help you differentiate between different colorways used for the same block.

► Creating Your Own Colorway

The Diamond Blocks below are not only great for the kitted version of this quilt, but will also help you calculate yardage and create your blocks for your Queen Star layout if you are doing your own colorway. In this case, ignore the F1 to F16 fabrics and shading. Instead, use the diamonds to lay out your own unique look. If you use Quiltster as a companion tool, you can translate your

Quiltster design to these diamonds as the first step to organizing your pattern. Simply cut a swatch of each fabric you plan to put in each diamond space and glue it into that location in the diamond.

Note that **(1)** swatch means you will need **(1)** 2-1/2" x 42" strip of the selected fabric. If you repeat a fabric in the diamonds below, you will need to have as many 2-1/2" x 42" strips as show up in the diamonds. When you have finalized your color layout, add up the number of swatches from each fabric and set up a table for the # of 2-1/2" x 42" strips you need of each. Cut the strips using the instructions on the following pages, then, stack them in order, with S1 on top and S16 on the bottom, clip them together, and place them into the identified Bags.
